Data Transfer Object

End to End: A Tenet's Review

Divisions
of
Modules and Methodes

Layered Architecture and Single Responsibilities

Each Layer Does Specific Task

- **Routes** only map URLs
- **Middleware** only verifies: login, uploads, input
- **Controllers** only translate HTTP
- **Services** hold the rules: approval, tenancy, reviews
- **Models** own the schema and its validation

One module Per feature

- post, homeRegister, chat, review, admin, profile and user each have their own route and controller

- **Frontend**: one page module per screen
- **Backend** method is **13.5 lines** on average

Code Reuse

- **asyncHandler** sends every error to one handler
- **ApiError** and **ApiResponse** give every reply the same shape
- **cloudinary** and **removeLocalFile** serve every upload
- **chatApi.js**, **socket.js** and **config.js** keep server calls out of the UI
- **Navbar** is shared by all 10 pages

Module	Used In
asyncHandler	**41** handlers in **9** controllers
ApiError	**16** backend files
ApiResponse	**8** backend files
verifyJWT	**7** route files
upload	**3** route files
uploadOnCloudinary	**2** files (admin approval, profile)
removeLocalFile	**3** files

Lines of code

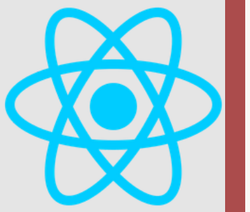

Module	Count	Avg LOC	Max LOC
BackEnd	60	49.3	220 services/ admin.service.js
FrontEnd	26	231.8	755 pages/ HomeRegister.js
Total	86	104.5	755 pages/ HomeRegister.js

Methods	Count	Avg LOC	Max LOC
BackEnd	142	13.5	77 validatePost
FrontEnd	224	30.6	621 HomeRegister
of which React Component	53	100.8	621 HomeRegister
Total	366	24.0	621 HomeRegister
